Antenatal Risk Assessment Part A - Pre-Pregnancy (circle if applicable) **Score** Age ≤ 17 at delivery Age ≥ 35 at delivery 2 1 Weight ≥ 91 kg Weight ≤ 45 kg Height < 152 cm 1 **Diabetes Intrapartum Risk Assessment** Controlled by diet only 1 Insulin used (circle if applicable) 3 Score Retinopathy documented 3 2 < 34 weeks **Heart Disease** 35 - 36 weeks Asymptomatic (no affect on daily living) 1 Meconium in labour 1 3 Symptomatic (affects daily living) Gestational hypertension 1 Hypertension 1 Anemia 2 140/90 or greater 1 Fever Antihypertensive Drugs 3 1 Fetal heart rate abnormalities 2 **Chronic Renal Disease Documented** Bleeding 1 OTHER medical disorders e.g. epilepsy, severe asthma, 1 Ruptured nbranes > 24 hrs. lupus, Crohn's disease 1 Seizure 1 Coag pathy (circle if applicable) Part B - Past Obstetrical History Total In apart n Risk Score Score 3 Neonatal death(s) Indications for Induction Stillbirth(s) 3 1 Abortion between 12 to < 20 weeks and birth weight <500 grams (circle primary indication) ntepartum hemorrhage 1 Delivery at 20 - 37 weeks Evide of fetal compromise Cesarean section 2 Current intrauterine death Small for dates - 5th percentile 1 Term, prelabour rupture of membranes Large for dates - 95th percentile 1 Evidence of Intrauterine growth restriction RH Isoimmunization - unaffected infant 1 Gestational hypertension 3 RH Isoimmunization - affected infant Past history perinatal death 1 Major cong. anomaly e.g. Chromosomal, Heart, C Diabetes Gestational diabetes 9 Gestation > 41 weeks 10. Part C - Problems in Current Pregnan ircle if Evidence of large for gestational age 11. Chronic essential hypertension Score 12. 13. Social 2 Diagnosis of large for dates 14. Other, Specify _ Diagnosis of small for dates 3 Polyhydramnios or oligohyd 2 Operative Delivery (c/s/, forceps, vacuum extraction) Multiple pregnancy 3 Malpresentation (breech or transverse lig 3 (circle primary indication) 2 Membranes ruptured before 37 we 1. Elective repeat c/s 2. Bleeding < 20 weeks Malpresentation (breech or transverse lie) 1 3. Arrest of progress in labor - first stage 3 Bleeding ≥ 20 weeks 2 Gestational hypertension 4. Arrest of progress in labor - second stage Proteinuria ≥ 1+ 5. Failed trial of forceps 1 Gestational diabetes documented Fetal heart rate abnormalities 1 6. 7. 3 Blood antibodies (Rh, Anti C, Anti K, etc.) Intrapartum hemorrhage Anaemia (Hgb< 100 gm. per L) 8. Pyrexia in labor 1 Pregnancy > 41 weeks 9. Maternal hypertension 1 10. Maternal cardiac disease Poor weight gain (26 - 36 weeks<0.5kg/week or weight loss) 1 Smoker - anytime during pregnancy 11. Maternal endocrine disease (diabetes) 12. RH isoimmunization (circle if applicable) 13. Fetal malformation Part D - Other Risk Factors 14. Fetal illness (low platelets, etc.) Score 15. Multiple pregnancy 3 Major fetal anomaly 16. Prior hysterotomy Acute Medical Disorder (acute Asthma, Thyrotoxicosis, UTI, etc.) 3 17. Placenta previa 3 Cervical surgery 18. Advanced maternal age Substance use: 19. Maternal exhaustion 3 Alcohol - > 3 drinks on any one occasion during pregnancy 20. Maternal request Alcohol - ≥ 1 drink per day throughout pregnancy 3 21. Other, specify Drug dependent 3 Date Signature **Total Antepartum Risk Score**

Guidelines Delivery Record

The delivery record revisions have been made to improve the record as both a clinical and data collection tool. Documentation on the record is a collaborative responsibility of the physician, midwife and nurse caring for the patient during labor and at delivery. The physician/midwife caring for the patient at the time of delivery is responsible to ensure accuracy of the documentation prior to signing the record. Comments on the revisions and/or recommendations for improvement can be directed to the Alberta Perinatal Health Program, Suite 101 Kingsway Professional Centre, 10611 Kingsway Avenue, Edmonton AB T5G 3C8.

Part One

Antenatal Risk Assessment

Total the scores of part A, B, C, and D. Low Risk 0 - 2, Moderate Risk 3 - 6, High Risk ≥ 7

The risk scores are cumulative and not exclusive of each other. For example, Part A - Pre-Pregnancy, if the patient is diabetic with retinopathy, the patient would score a total of 7, ie: patient would score 1 point if she has diabetes, 3 points if she is on insulin, and an additional 3 points for the presence of retinopathy.

DEFINITIONS

Live Birth: The complete expulsion or extraction from the mother, irrespective of the deation of regnancy, of a fetus in which, after expulsion or extraction there is breathing, beating of the heart, pulsation of the umbilical order death and a fetus in which, after expulsion or extraction there is breathing, beating of the heart, pulsation of the umbilical order death and a fetus in which, after expulsion or extraction there is breathing, beating of the heart, pulsation of the umbilical order death and a fetus in which, after expulsion or extraction there is breathing, beating of the heart, pulsation of the umbilical order death and a fetus in which, after expulsion or extraction there is breathing, beating of the heart, pulsation of the umbilical order death and a fetus in which, after expulsion or extraction there is breathing, beating of the heart, pulsation of the umbilical order death and a fetus in which, after expulsion or extraction there is breathing, beating of the heart, pulsation of the umbilical order death and a fetus in the fetus in the

Stillbirth: The complete expulsion or the extraction from the mother affect leas 20 week pregnancy, or after attaining a weight of 500 grams or more, a fetus in which, after expulsion or extraction after a no scattering, beating of the heart, pulsation of the umbilical cord or unmistakable movement of voluntary muscle.

Gravida: Total number of pregnancies for this mother, including is pregnancy.

Term: Total number of babies born to this mother at ≥ 37 weeks gesta, in, excluding this birth. *Note: if mother was a gravida 1 and had twins at 38 weeks, she would be G1T2*.

Preterm: Total number of babies born betweep 20 and 37 betweeks of gestation.

Abortions: Total number of pregnancy losses plan to be a gestation and less than 500 grams birth weight, including ectopic pregnancies.

Living: Total number of children currently living on this mother, excluding this birth.

Neonatal Death: Death of an infant born alive this mother that occurred within 28 days of age.

Small for Gestational Age: Infant's birth weight below the 5th percentile for gestational age.

Large for Gestational Age: Infant's birth weight above the 95th percentile for gestational age.

Major Congenital Anomaly: Includes any lethal anomaly, any anomaly that requires corrective surgery or any other anomaly that has a major effect on growth and development or quality of life.

Acute Medical Disorder: Refers to the presence of a significant medical condition that may affect the pregnancy or which may adversely be affected by the pregnancy. This may include a new medical disorder which appears during the pregnancy or it may be an acute attack or exacerbation of a pre-existing medical disorder.

Drug Dependent: Implies inappropriate or excessive use of any substance which may adversely affect the outcome of the pregnancy or the newborn.

Intrapartum Risk Assessment

The intrapartum risk assessment components are to be scored when the mother is admitted in labor and/or for induction of labor. These factors are known to be associated with potential risk to the fetus or the mother. As these factors have not been validated an arbitrary risk score has been assigned.
